

RECITATION OF THE CLAIMS

1. (Original) A plant support and container, comprising:

an enclosure generally cylindrical and having open ends and side portions, each side portion being configured to accept and surround a plant, the side portions being secured by means to keep the side portions in place so as to support the plant.
2. (Previously submitted as new) A support for upwardly oriented foliage comprising:

a plurality of wall sections wherein the plurality of wall sections cooperate to define a substantially continuous shape periphery, base and upper edge; and

a means for cooperatively engaging each one of the plurality of wall sections to at least one other of the plurality of wall sections.
3. (Previously submitted as new) The support of Claim 2 further comprising a base that defines a flange, the flange comprising at least one aperture.
4. (Previously submitted as new) A support for upwardly oriented foliage comprising:

a plurality of wall sections wherein the plurality of wall sections cooperate to define a substantially continuous shape periphery, base and upper edge;

at least one aperture disposed in each one of the plurality of wall sections; and

a means for fastening one of the plurality of wall sections to at least one other of the plurality of wall sections.

5. (Previously submitted as new) The support of Claim 4 further comprising a base that defines a flange, the flange comprising at least one aperture.
6. (Previously submitted as new) A support for upwardly oriented foliage comprising:
a plurality of wall sections wherein the plurality of wall sections cooperate to define a substantially continuous shape periphery, base and upper edge;
at least one aperture disposed in each one of the plurality of wall sections; and
at least one fastener wherein the fastener engages the aperture disposed in a wall section and positions the wall section along the shape periphery.
7. (Previously submitted as new) The support of Claim 2 further comprising a base that defines a flange, the flange comprising at least one aperture.
8. (Previously submitted as new) A method for supporting upwardly oriented foliage comprising:
forming a plurality of wall sections wherein the plurality of wall sections cooperate to define a substantially continuous shape periphery, base and upper edge; and
a means for connecting each one of the plurality of wall sections to at least one other of the plurality of wall sections.
